RE: Junior Developer & Special Projects Assistant

Dear Hiring Team,

My name is Kaylan and I am pleased to submit my application for the Junior Developer and Special Projects Assistant role. I believe my skill set, congeniality, and self motivation are an excellent match with WestGrid.

I am currently a fourth-year student enrolled in the Bachelor of Computer Information Systems at Okanagan College. My background consists of working in construction for 8 years, primarily in the sheet metal trade and I spent two years working in the financial industry.

Having a diverse background highlights my ability to adapt and be flexible, understandably an important trait to have when being involved in the field of computer science as there are many different languages, frameworks and areas to explore. Other transferable skills I would like to bring to your attention are:

- A strong work ethic and a production-oriented mindset
- Ability to visualize the scope of a project and manage time effectively
- Interpersonal skills
- Attention to detail

I believe working as a software developer is the perfect marriage of these skills as it is both highly collaborative and production oriented.

Taking the BCIS program has been of great value in preparing me for work in a technical environment. I have been exposed to several programming languages, frameworks, and concepts that have established a solid foundation of skills for software development. I am proud to say that I earned placement on the Dean's List for multiple semesters throughout my degree.

I appreciate the time you have invested to read this cover letter and I encourage you to please review the attached resume. I enthusiastically look forward to speaking with you more about this position in the future.

Best regards,

Kaylan Horne
